Subject Index

Analysis of weight frequency particle size distributions with special application to bimodal floc size distributions in shear flocculation, 87
Application of thermodynamic approach to pneumatic transport at various orientations, 199
Attrition
  kinetic, thermal and chemical, of manganese chloride particles in a fluidized bed, 97
Axial dispersion of solids
  in spiral fluidized beds, 1

Ball mill
  laboratory, slurry density effects on ball milling in a, 285
Ball mill grinding of coal
  effect of operating parameters in, 255
Ball milling
  in a laboratory ball mill, slurry density effects on, 285
Bimodal floc size distributions
  in shear flocculation, 87
Breakage and selection functions in batch grinding
  effect of powder filling on, 275
Bubble columns involving fine powders
  hydrodynamic and heat transfer characteristics of, 25

Carriers in powder coatings
  kinetics of fines transfer among, 217
Ceramics processing
  implications of ordering in simulated packed beds formed from binary mixtures of particles in two dimensions for, 11
Clusters of identical spheres
  sedimentation of: comparison of methods for computing velocities, 227
Coal
  British low-rank, grinding ultrafine for liberation, prediction of economics of, 75
  effect of operating parameters in stirred ball mill grinding of, 255
  ultrafine, influence of reagent type on kinetics of flotation of, 153
Coating–mechanofusion processing of powders
  mechanism of, 45
Coatings
  powder, kinetics of fines transfer among carriers in, 217
Conductivity of copper powders
  with and without surface treatment, 191
Copper powders
  with and without surface treatment, conductivity of, 191

Data reduction
  from thin-film heat gauges in fluidized beds, 249
Density of slurry
  effects on ball milling in a laboratory ball mill, 285
Dispersion
  axial, of solids in spiral fluidized beds, 1
Drag coefficient of irregular particles
  in Newton's settling regime, 69

Effect of operating parameters
  in stirred ball mill grinding of coal, 255
Effect of powder filling
  on selection and breakage functions in batch grinding, 275
Effect of slurry density
  on ball milling in a laboratory ball mill, 285
Equilibrium distributions of size and weight
  in linear flocculation, 145

Fines transfer
  among carriers in powder coatings, kinetics of, 217
Flow/hyperlayer field-flow fractionation
  in rapid particle size analysis of ground minerals, 53
Fluidized bed
  bubbling, performance model of hydrodynamics of, 261
  data reduction from thin-film heat gauges in, 249
  interpreting probe signals from, 117
  kinetic, thermal and chemical attrition of manganese chloride particles in, 97
  solid–liquid, pressure drop in, 129
  spiral, axial dispersion of solids in, 1

Gas–solid suspension flows
  improved isokinetic sampling probe for measuring local gas velocity and particle mass flux of, 183
Grinding
  batch, effect of powder filling on selection and breakage functions in, 275
  British low-rank coals ultrafine for liberation, prediction of the economics of, 75
Ground minerals
  rapid particle size analysis of, by flow/hyperlayer field-flow fractionation, 53

Heat gauges
  thin-film in fluidized beds, data reduction from, 249
Heat transfer and hydrodynamic characteristics
  of bubble columns involving fine powders, 25
Hydrodynamic aggregates
  motion of, 173
Hydrodynamic and heat transfer characteristics
  of bubble columns involving fine powders, 25

Image force deposition
  in a parallel-plate channel, 149

© Elsevier Sequoia/Printed in The Netherlands

Improved isokinetic sampling probe
for measuring local gas velocity and particle mass flux of gas–solid suspension flows, 183
Influence
of particles falling from flights on volumetric heat transfer coefficient in rotary dryers and coolers, 125
of reagent type on kinetics of ultrafine coal flotation, 153
of rocking motion on mixing of powders, 65
Interpreting probe signals
from fluidized beds, 117

Kinetic, thermal and chemical attrition
of manganese chloride particles in a fluidized bed, 97
Kinetics of fines transfer among carriers in powder coatings, 217

Linear flocculation
equilibrium distributions of size and weight in, 145
Local gas velocity of gas–solid suspension flows
improved isokinetic sampling probe for measuring, 183
Locked particle standard deviation
for two-phase systems, 109

Manganese chloride particles in a fluidized bed
kinetic, thermal and chemical attrition of, 97
Mechanism of combined coating–mechanofusion processing of powders, 45
Mechanofusion-coating processing of powders
mechanism of, 45
Mercury porosimetry
powder particle sizes from, 163
Mixtures
binary of particles in two dimensions in simulated packed beds, ordering in: implications for ceramics processing, 11
Model
performance, of bubbling fluidized bed hydrodynamics, 261
Modelling the screening process
a probabilisitc approach, 37
Motion of hydrodynamic aggregates, 173

Newton's settling regime
drag coefficient of irregular particles in, 69

Ordering
in simulated packed beds formed from binary mixtures of particles in two dimensions: implications for ceramics processing, 11

Packed beds
formed from binary mixtures of particles in two dimensions: implications for ceramics processing, 11
Parallel-plate channel
image force deposition in, 149
Particle mass flux of gas–solid suspension flows
improved isokinetic sampling probe for measuring, 183
Particle size analysis
of ground minerals by flow/hyperlayer field-flow fractionation, 53
Particle size determination
via sedimentation, porosity effects on, 141
Particle size distributions
weight frequency, analysis of, with special application to bimodel floc size distributions in shear flocculation, 87
Particle sizes
of powders from mercury porosimetry, 163
Particles
binary mixtures of, in two dimensions in simulated packed beds, ordering in: implications for ceramics processing, 11
falling from flights; influence on volumetric heat transfer coefficient in rotary dryers and coolers, 125
irregular, drag coefficient of, in Newton's settling regime, 69
Performance model of bubbling fluidized bed hydrodynamics, 261
Pneumatic transport
at various pipe orientations, application of thermodynamic approach to, 199
Porosity effects
on particle size determination via sedimentation, 141
Powder coatings
kinetics of fines transfer among carriers in, 217
Powder filling
effect of, on selection and breakage functions in batch grinding, 275
Powder particle sizes
from mercury porosimetry, 163
Powders
copper, with and without surface treatment, conductivity of, 191
fine hydrodynamic and heat transfer characteristics of bubble columns involving, 25
influence of rocking motion on mixing of, 65
mechanism of combined coating–mechanofusion processing of, 45
Prediction of the economics of grinding a British low-rank coal ultrafine for liberation, 75
Pressure drop in solid–liquid fluidized beds, 129
Probe signals from fluidized beds
interpretation of, 117

Rapid particle size analysis
of ground minerals by flow/hyperlayer field-flow fractionation, 53
Reagent type effect on kinetics of ultrafine coal flotation, 153
Rocking motion
influence of, on mixing of powders, 65
Rotary dryers and coolers
influence of particles falling from flights on volumetric heat transfer coefficient in, 125

Sampling probe
for measuring local gas velocity and particle mass flux of gas–solid suspension flows, 183
Screening process
probabilistic approach to modelling of, 37

Sedimentation
of clusters of identical spheres: comparison of methods for computing velocities, 227
porosity effects on particle size determination via, 141
Selection and breakage functions in batch grinding
effect of powder filling on, 275
Shear flocculation
bimodal floc size distributions in, 87
Shot production by water atomization, 209
Slurry density
effects on ball milling in a laboratory ball mill, 285
Thermodynamic approach to pneumatic transport at various pipe orientations, 199
Two-phase systems
locked particle standard deviation for, 109

Velocities of clusters of identical spheres
methods for computing, 227
Volumetric heat transfer coefficient
in rotary dryers and coolers, influence of particles falling from flights on, 125

Water atomization in shot production, 209
